

Stall mat installation

Tools needed

- Utility knife
- Square or other straight edge
- White chalk
- Tape measure

Installation steps

1. Clean stall thoroughly. If the stall has a soft base, make it as level as possible. This will ensure that the mats will lie flat and make for easy cleaning.
2. Place the required mats in the alleyway outside each stall.
3. Measure the stall and decide on the best fitting pattern for the stall. Bring the mats in one at a time, beginning with the mats that require little or no cutting.
4. Measure the uncovered area; mark the desired mat with chalk.
5. Using the utility knife and straight edge as a cutting guide, score the mat several times and then cut through to make a clean cut.
